The *doses* of all the formulæ are proportioned for children who have reached the age of *two years*, one teaspoonful ($f\ddot{z}j$) being the dose of each preparation.

The following Table represents the *doses* for different ages, apportioned according to this standard :—

For a child of 6 mon's and over $\frac{1}{4}$ of a teaspoonful =	$f\ddot{z}\frac{1}{4}$.
" " 1 year and over $\frac{1}{8}$ "	= $f\ddot{z}ss.$
" " 2 years and over 1 teaspoonful	= $f\ddot{z}j.$
" " 4 " " 2 teaspoonfuls	= $f\ddot{z}ij.$
" " 8 " " 4 "	= $f\ddot{z}ss.$

In prescribing, the Physician will write the *number* of the Prescription, its *title*, the *record number* or *name* of the patient, and the *directions* for using it, e. g. :—

R.

No. 1.

Liquor Cinchonidiae Sulphatis.

S.

For No. 1000.

Teaspoonful four times daily.

Date.

Signature.

Unless otherwise directed, the apothecary will always dispense three fluidounces ($f\ddot{z}ij$) of the fluid preparations.

For convenience and certainty of measurement when the *dose* to be prescribed is less than *one fluidrachm* (say $f\ddot{z}\frac{1}{4}$ or $f\ddot{z}ss$), the apothecary will dilute a proportional quantity (say $f\ddot{z}vj$ or $f\ddot{z}jss$) of the mixture with sufficient of some suitable menstruum to raise the amount to *three fluidounces* ($f\ddot{z}ij$), and the patient will take of this *one teaspoonful* ($f\ddot{z}j$).

POISONS AND THEIR ANTIDOTES.

Acids, Mineral.—Alkalies in dilute solution; lime; whitewash; magnesia; soap. Quickness of administration essential. Avoid emetics and stomach-pump.

Acids, Vegetable.—Soap; soda or potassa in dilute solution; except for *oxalic acid*, for which give lime, whitewash, or chalk.

Aconite.—Emetics; stomach-pump; tannic acid; digitalis; laudanum; warmth; stimulation; recumbent position.

Alkalies, and their salts.—Vinegar; weak acids; oil freely; opium.

Alum.—Albumen.

Antimony, and its salts.—Tannic acid; opium; external warmth.

Arsenic, and its salts.—Emetics; stomach-pump; recently made hydrated sesqui-oxide of iron; magnesia; dialysed iron; oil or fat.

Atropia.—See *Belladonna*.

Belladonna.—Emetics; stomach-pump; tannic acid; morphia hypodermically.

Bismuth, and its compounds.—Albumen; milk.

Bromine.—Soap; oils.

Cannabis Indica.—Emetics; lemon juice; quiet; if exhaustion, stimulants.

Carbolic Acid.—Stomach-pump; solution of saccharate of lime; hot and cold douche.

Chloral and Chloroform.—Alternate hot and cold douche; artificial respiration; cardiac stimulants.

Cocculus Indicus.—Emetics; stomach-pump; at first, give opium; chloral; chloroform; later, stimulants. No chemical antidote.

Colchicum.—Emetics; stomach-pump; tannic acid; opium; stimulants.

Conium.—Emetics; stomach-pump; artificial respiration; tannic acid; opium.

Copper, and its salts.—Albumen; milk; calcined magnesia; yellow prussiate of potash.

Croton Oil, and other drastic purgatives.—Emetics; albuminous drinks; bismuth; external heat.

Cyanide of Potassium.—See *Hydrocyanic Acid*.

Digitalis.—Emetics; stomach-pump; tannic acid; stimulants.

Gelsemium.—Same as *Aconite*.

Hydrocyanic Acid.—Alternate hot and cold douche; intravenous injection of aqua ammoniæ; atropia hypodermically.

Hyoscyamus.—Same as *Belladonua*.

Iodine.—Starch, freely; if this cannot be obtained, then soap.

Iron, Salts of.—Soap; dilute alkalies; albumen.

Lead, Salts of.—Emetics; stomach-pump; alkaline sulphates; soap; albumen; milk; purge.

Mercury, Salts of.—Emetics; albumen; milk.

Opium.—Stomach-pump; atropia hypodermically; coffee; flagellation; artificial respiration; electricity.

Phosphorus.—Emetics; sulphate of copper in small doses; crude oil of turpentine; stomach-pump; avoid oils or fats.

Potash Salts.—No distinct antidote.

Santonin.—Emetics; purges; stimulants; artificial respiration.

Silver, Salts of.—Common salt, freely; albumen.

Soda Salts.—No distinct antidote.

Stramonium.—Same as Belladonna.

Strychnia.—Emetics; stomach-pump (*at first only*); tannic acid; chloral; bromide of potash; æther; chloroform; rest.

Veratrum Viride.—Same as Aconite.

Zinc, Salts of.—Albumen; carbonate of soda; milk, freely.

INFANT DIET.

Diet from Birth to Age of Six Months.

(Five to six meals in 24 hours.)

MILK, CREAM, LIME-WATER, ARROWROOT WATER.

Take four tablespoonfuls of each, place in bottle with a lump of sugar, warm the whole by standing bottle in warm water.

Arrowroot Water is made by taking *one and a half teaspoonfuls* of arrowroot, rubbing it down until smooth, with a tablespoonful of cold water, and then adding *one pint* of boiling water, stirring all the time.

Diet from Six to Twelve Months Old.

(Five meals in the day.)

FIRST MEAL, 7 A. M.

Mellin's food, one tablespoonful, or Flour Ball grated, one to two teaspoonfuls.

Hot water, four tablespoonfuls.

Warm milk, enough to make half a pint.

Dissolve the Mellin's food or rub down the grated Flour Ball in the hot water by stirring, then add the milk, and mix thoroughly.

SECOND MEAL, 10.30 A. M. THIRD MEAL, 2 P. M.

A breakfast cupful of milk with four tablespoonfuls of lime-water.

FOURTH MEAL, 5.30 P. M. Same as first.

FIFTH MEAL, 10.30 P. M. Same as second.

Diet for a Child One Year Old.

(Five meals in the day.)

FIRST MEAL, 7 A. M.

Two teaspoonfuls of grated Flour Ball in half a pint of milk.

SECOND MEAL, 10.30 A. M.

Half a pint of milk with four tablespoonfuls of lime water.

THIRD MEAL, 2 P. M.

The yolk of one egg beaten up in a teacupful of milk.

FOURTH MEAL, 5.30 P. M. Same as the first.

FIFTH MEAL. Same as the second.

FOR DRINK—Filtered water.

Diet for a Child Two Years Old.

BREAKFAST, 7.30 A. M.

Milk.

The lightly boiled yolk of an egg.

Thin bread and butter (bread one day old).

LUNCH, 11 A. M.

Milk.

A thin slice of bread and butter.

DINNER, 1.30 P. M.

Beef-tea, or small piece of minced roast beef or mutton. One well-mashed potato, moistened with gravy.

Rice and milk.

SUPPER, 6 P. M.

Milk.

Bread and butter.

FOR DRINK—Filtered water.

Diet in Mucous Disease for a Child of Seven Years.

BREAKFAST, 7.30 A. M.

Milk, with lime-water; four tablespoonfuls of lime-water to each tumblerful of milk.

The lightly-boiled yolk of an egg, a thin slice of well-toasted bread, or stale bread.

DINNER, 12 M.

A mutton chop without fat, broiled, or a slice of roast beef or mutton, occasionally a bowl of meat broth. Stale bread or toast.

SUPPER, 7 P. M.

Milk and lime-water.

Stale bread or toast.

FOR DRINK—Filtered water.

Starch food to be avoided as much as possible.

BARLEY WATER.

To prepare barley water, put two good teaspoonfuls of washed pearl barley with a pint of cold water in a saucepan, and boil slowly down to two-thirds. Strain.

BEEF-TEA.

Take one pound of lean beef, and mince it. Put it, with its juice, into an earthen vessel containing a pint of tepid water, and let the whole stand for one hour; strain well, squeezing all the juice from the meat. Place on the fire, and slowly raise just to the boiling point, stirring it briskly all the time. Season with salt and pepper to taste.

In administering this, always be careful to stir up the sediment.

FLOUR BALL.

Take one pound of good flour—unbolted, if possible—tie it up *very tightly* in a pudding-bag; put it in a pot of boiling water early in the morning, and let it boil till bedtime, then take it out and let it dry. In the morning peel off from the surface, and throw away, the thin rind of dough, and with a grater, grate down the hard dry mass into a powder. To use this, take from one to two teaspoonfuls of the powder, rub it down till smooth with a tablespoonful of cold milk, and add a tumblerful of hot milk, stirring it well all the time.

LIME-WATER.

Take a piece of unslaked lime, as large as a walnut, put it into two quarts of clear water, stir about thoroughly, allow to settle, and use only from the top.

WINE WHEY.

Boil a pint of fresh milk; while boiling, pour in a small tumblerful of sherry wine (eight tablespoonfuls), bring it to the boil a second time, being careful not to stir it; as soon as it boils set it aside until the curd settles, and pour off the clear whey.
